### Objective:

As one of the country's busiest and most successful deep water ports, Southampton Docks handles approximately 1.2 million passengers a year and required a comprehensive CCTV system to effectively cover and monitor three passenger terminals and a large berthing area, previously used by the QEII.

### Requirements:

- Networked multi-camera installation
- 24 hour complete coverage of whole terminal
- 25 image per second recorded frame rate

### The ClearView Solution:

To achieve the complete coverage required, ClearView used a variety of techniques to transmit the CCTV images across the network, including wired and wireless IP.

High speed colour/mono domes were used to provide colour images during the day. But at night, when lighting levels are low, they switch to black and white to provide the highest quality images for viewing by operators in the control room.

**If you are interested in a bespoke CCTV system to effectively meet all your requirements, protected by on-site reactive and preventative maintenance support, please call now on 01245 214104.**
