

## CCTV Decoding Systems

### Simple to use, Time Saving and Effective

### Benefits

- Easy to use for non-technical staff
- Speeds up investigations
- Makes CCTV more effective in solving crime
- Intuitive design for effective and quick use
- Easily present your data with minimum "mouse-clicks"

### Features

- Auto-code detection of digital CCTV, audio and video formats
- Play DVD-/+/RAM, CD, digital stills media and USB
- Convert digital to analogue video and vice versa
- Variety of inputs available, including fire wire, USB, stereo audio and LAN
- High speed 1:2 duplication
- File verification and deleted file retrieval
- Video & audio encryption
- Audit trail, fully passworded

The huge range of different CCTV recording formats has always presented law enforcement agencies with a challenge when trying to replay footage for investigative and evidential purposes. ClearView have been providing products to police forces since 1996 - when we introduced 'Unimux' - the world's first 'universal' video de-multiplexer.

Our Digi-range of CCTV viewing systems allows non-technical staff within the Criminal Justice System to view and process CCTV for investigative, evidential and presentation purposes. They make CCTV more effective in investigating and solving crime, speed up investigations and allow specialist video labs to focus on more technically challenging work.

With the Digi-range you can automatically identify, decode and display all common CCTV, still image, audio and video formats and output in a variety of standard formats.

## ClearView Communications are specialists in:

- CCTV
- Intruder Detection & Alarm
- Perimeter Surveillance
- Access Control and Intercoms
- Automated Gates and Barriers
- Public Address
- Fire Safety
- Integrated Security Systems
- Police compliant equipment

“Thank you so much for providing that player. It works perfectly. Really appreciate how helpful and quick you were with sorting this for us.”

*Martin Nadin - Visual Presentation Services, Health and Safety Laboratory*

“I have always found the staff at ClearView extremely willing to assist and receptive to new ideas and market wants. They continue to provide specialist products and, more importantly, consider the after sales and training as a key support element.”

*Dannie Parkes - West Midlands Police*

## Simple Operation

The systems have been developed for maximum simplicity and ease of use for non-technical users. All functions are accessed from the main system control screen that you will be instantly familiar with. Where possible, functions are automatic (e.g. automatic CCTV format detection), or they are easy to complete (e.g. three click process to convert to DVD).

## Automatic Detection and Play of Digital CCTV and Video formats

Automatically identify and select the appropriate CCTV player from the system's library. As a result, you save time and view footage directly rather than having to wait for the central facility for viewing or conversion. This can result in the evidence being shown and the suspect being charged immediately rather than being bailed to return when the footage has been processed.

## Easy to Use - Convert and Burn in 3 clicks

- Convert digital video footage and burn it to DVD for replay on a domestic DVD Video player
- Extract audio from a digital video file and export it for transcribing
- Convert proprietary CCTV to a format of your choice

## Image & Video Footage Capture and Printing

The Digi-products are suitable for creating video for presentation in court. You can capture an image or video sequence with ease. The file is then stored on the hard drive where it may be printed or burned quickly and easily. Video clips can be cut and added to a sequence along with still images and titles to make a compilation for presentation purposes.

## Security & Protection

The three tier user access control system encrypts usernames and passwords. Operations performed are recorded to a built-in audit trail.

## New Players and Codecs

New players and codecs are added to the system's library and regularly sent to you to ensure that the system is kept up-to-date with the latest players, system functions and software features.

## Key facilities include:

- Playback of Digital CCTV
- Analogue to digital video conversion
- Image and video capture
- Conversion between popular digital video formats
- Duplication
- Video and image editing
- Image save and print
- Document preparation
- Encryption
- Verification
- Audit trail
