

Bespoke CCTV Upgrade EuroTunnel, France

- CCTV
- Intruder Detection & Alarm
- Perimeter Security
- Access Control and Intercoms
- Automated Gates and Barriers
- Public Address
- Fire Detection
- Integrated Security Systems

“ClearView has provided a user interface which is very intuitive, this has meant the operators quickly and easily adopted the new system. The control centre software meets the new regulations and a networked system allows additional cameras to be added at any point.”

*Sylvain Pamart - Chief Project Manager,
EuroTunnel*

Objective:

EuroTunnel manages the Channel Tunnel link which is a large, demanding and diverse environment for surveillance and security, requiring a distributed system that can deliver high quality live and recorded video to many different users located throughout the site.

Requirements:

- tamper-proof, CCTV system capable of high definition images
- control centre technology for multi-user log in
- increased recording capacity
- audit trail to enable incident recording
- systems upgrade to incorporate new French regulations

The ClearView Solution:

Following a successful upgrade for the EuroTunnel UK terminal, ClearView installed a full CCTV recording and monitoring system in France. The new technology increased the video recording capacity from 3 to 31 days.

Video management software was loaded onto several workstations allowing operators to view any camera from any part of the network, and advanced analytics provide a powerful tool to identify alarms and capture video clips following an incident.

If you are interested in a bespoke security system to effectively meet all your requirements, protected by on-site reactive and preventative maintenance support, please call now on 01245 214104.
