Fire Alarms & Smoke Detection Installation to BS5839 standards

Maximising protection for your staff

On average, around 23,500 fires occur each year in non-residential buildings in the UK, with around 20 people losing their lives and over 1,100 people suffering from fire related injuries annually.

Huge financial losses can occur if buildings are not adequately protected. Most of these are avoidable if fire alarms and smoke detection systems are properly designed and installed.

Fire detection systems are essential to provide the earliest possible response to the potential out-break of a fire. The installation of a fire detection system to BS5839 standards can significantly reduce the risk of injuries, fatalities and financial losses.

The benefits of a professionally designed and installed fire alarm system.

- Meets your legal and insurance obligations
- Prevents damage to your establishment
- Keeps staff and visitors safe
- Early detection of potential fires
- Ensures comprehensive buildings insurance cover

Fire alarm and detection installations from ClearView

ClearView can design, install, monitor and maintain your fire alarm system with an 'open protocol' solution. Our fire detection systems can be installed into any environment and comprise any or all of the following:

- Point heat, optical and smoke detectors
- Manual call points
- Flame detectors
- Beam detectors
- Air sampling devices for early smoke detection
- Wire free systems
- Integration with security and building management

ClearView Communications fire safety services & products:

- Fire alarm & smoke detection
- Fire extinguisher maintenance
- Fire risk assessments
- Fire training

Voice Annunciators

An important aspect of the fire detection system is the choice of a voice annunciator PA system which gives a clear message if a fire is detected. Research has shown that while 13% of people react in a timely manner to a bell or tone, 75% of people react quicker to a voice message explaining the nature of the emergency.

Whether it's a stand-alone fire safety system or a fully integrated 'open protocol' system that can protect a number of buildings, ClearView have a fire detection solution that will provide peace of mind for fire wardens and management responsible for ensuring the safety of their fellow workers.

As part of a larger security technology solution, ClearView can design an appropriate fire detection solution using a variety of fire alarm technologies. We are able to provide fire protection to any building irrespective of its design.
